

## ZenCart Coupon Code Integration

This integration only works for ZenCart 1.3x or higher.

Login to your iDevAffiliate admin center and go to the cart integration wizard. Choose ZenCart in the dropdown menu. Complete the standard integration using the instructions found on the next page. Once this is done, continue below with the modification to support coupon code commissioning.

Open the **tpl\_footer.php** file you're using in the **/checkout\_success** folder and add the required code to the file. The code to be added to the file is highlighted in **RED** below.

### CODE UPDATE 1 OF 2

```
$idev_sale_amount = ($order_subtotal - $coupon_amount - $group_pricing_amount);  
$idev_sale_amount = number_format($idev_sale_amount,2,'.','');  
  
$idev_coupon_code = mysql_query("select coupon_code from " . TABLE_ORDERS . " where orders_id = '" . (int)$orders_id . "'");  
$idev_coupon_code = mysql_fetch_array($idev_coupon_code);  
$idev_coupon_code = $idev_coupon_code['coupon_code'];
```

### CODE UPDATE 2 OF 2

```
/sale.php?idev_saleamt=$idev_sale_amount&idev_ordernum=$orders_id&coupon_code=$idev_coupon_code\" h
```

Once the above modification is done, ZenCart will now pass iDevAffiliate the coupon code used at the time of checkout and you can now use the coupon code commissioning feature. To start using this feature, simply create a coupon code in your cart system like you have always done. Then login to your iDevAffiliate admin center and go to **Commissions** (menu at top) > **Coupon Code Override Commissions**. You can now assign the coupon code to an affiliate. Each time that coupon code is used, the assigned affiliate will receive a commission for the defined amount.
